

Spontaneous EEG and Sleep

Donders MEG/EEG Toolkit

Martin Dresler

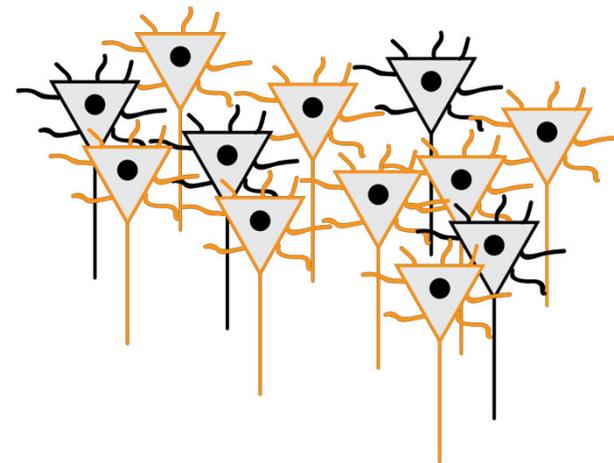

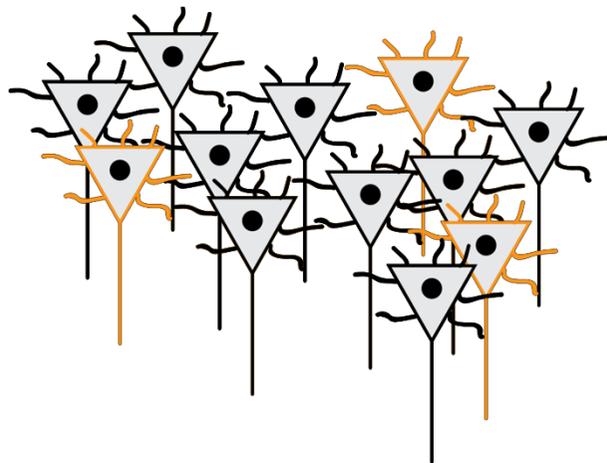

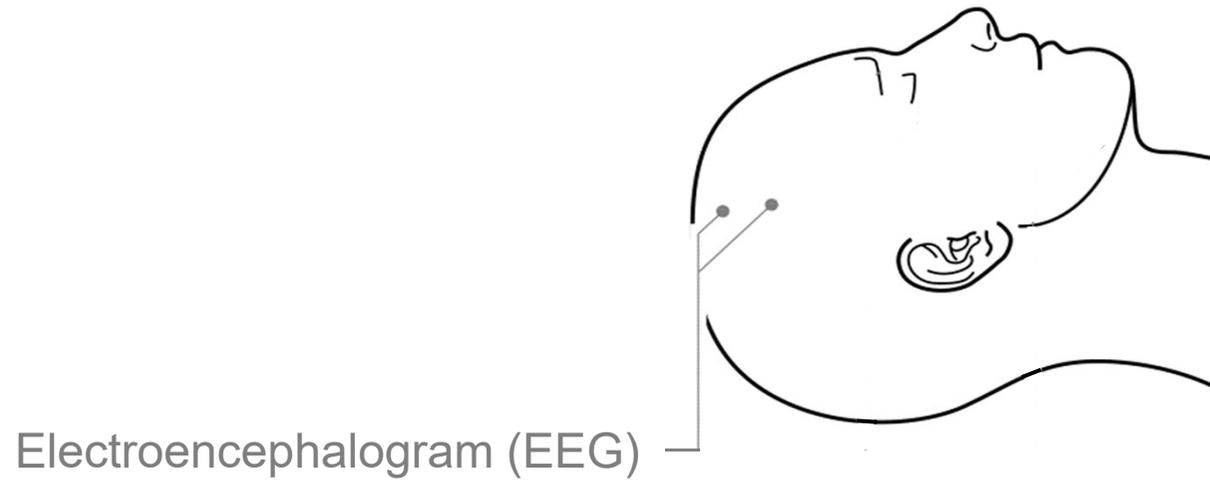

# Spontaneous EEG and Sleep

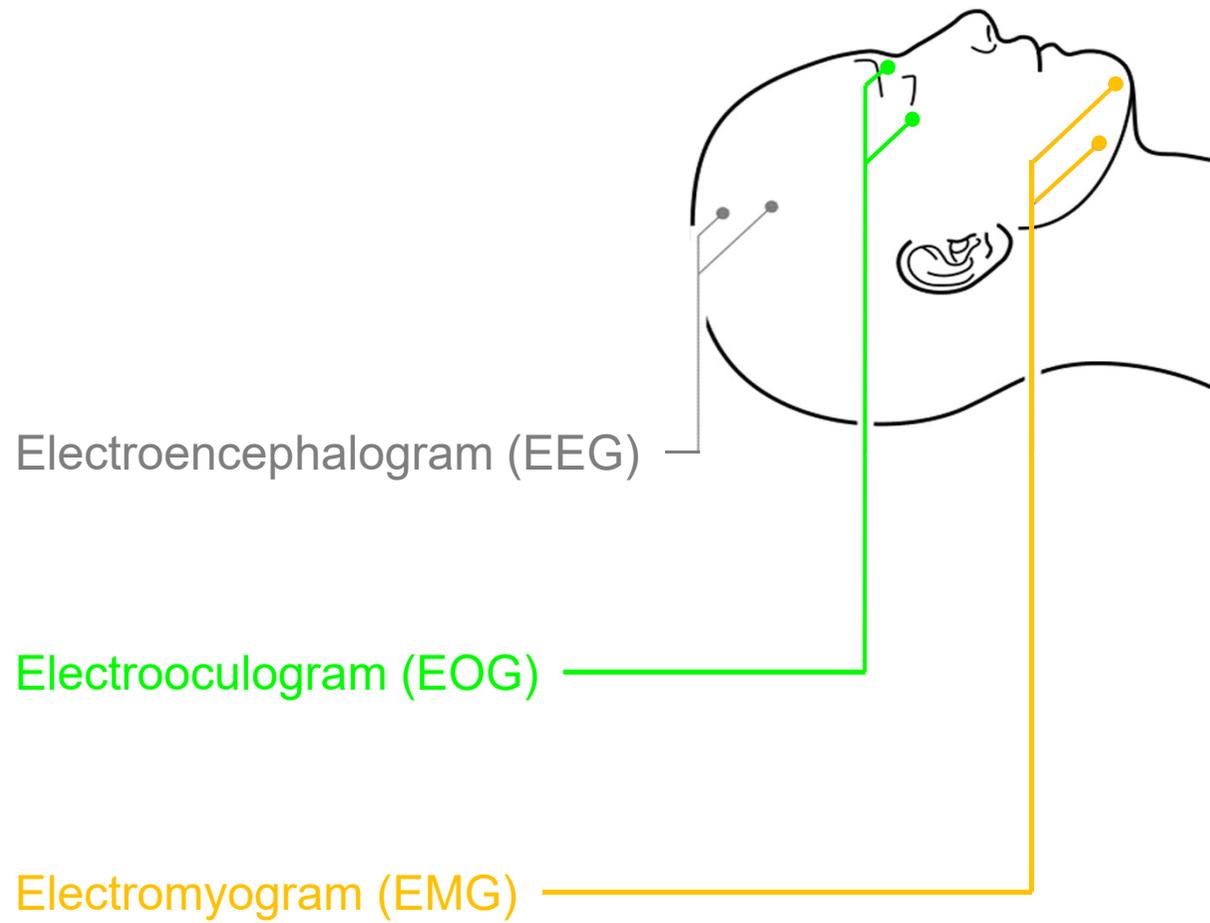

## Agenda

- Recording methods
- Oscillations on different time scales
- Examples: functions of sleep

# Polysomnography

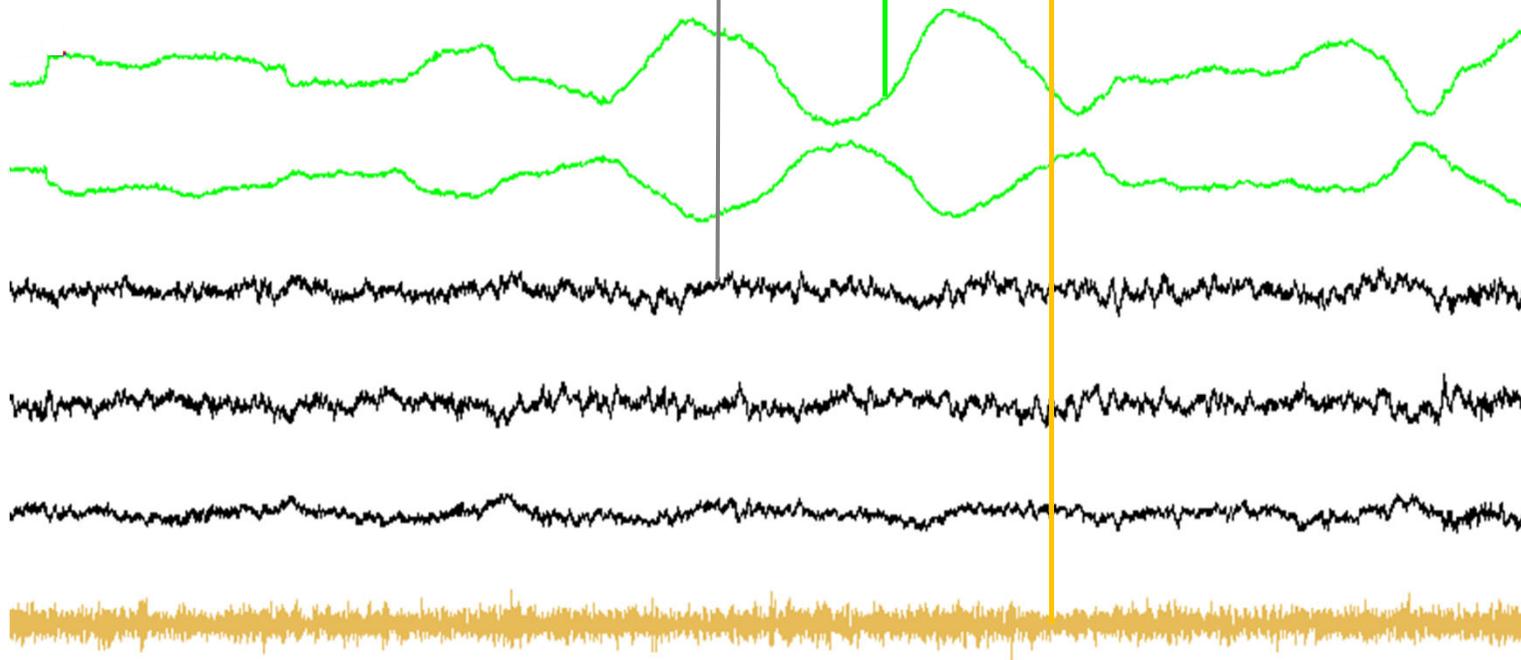

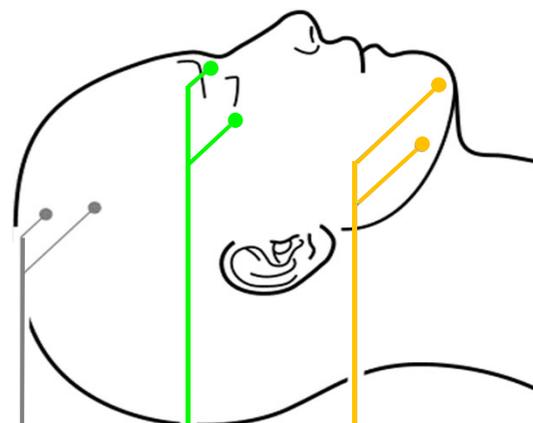

# Polysomnography

## Sleep stages: N1

- slowing of EEG
- disappearance of alpha
- slow eye rolling

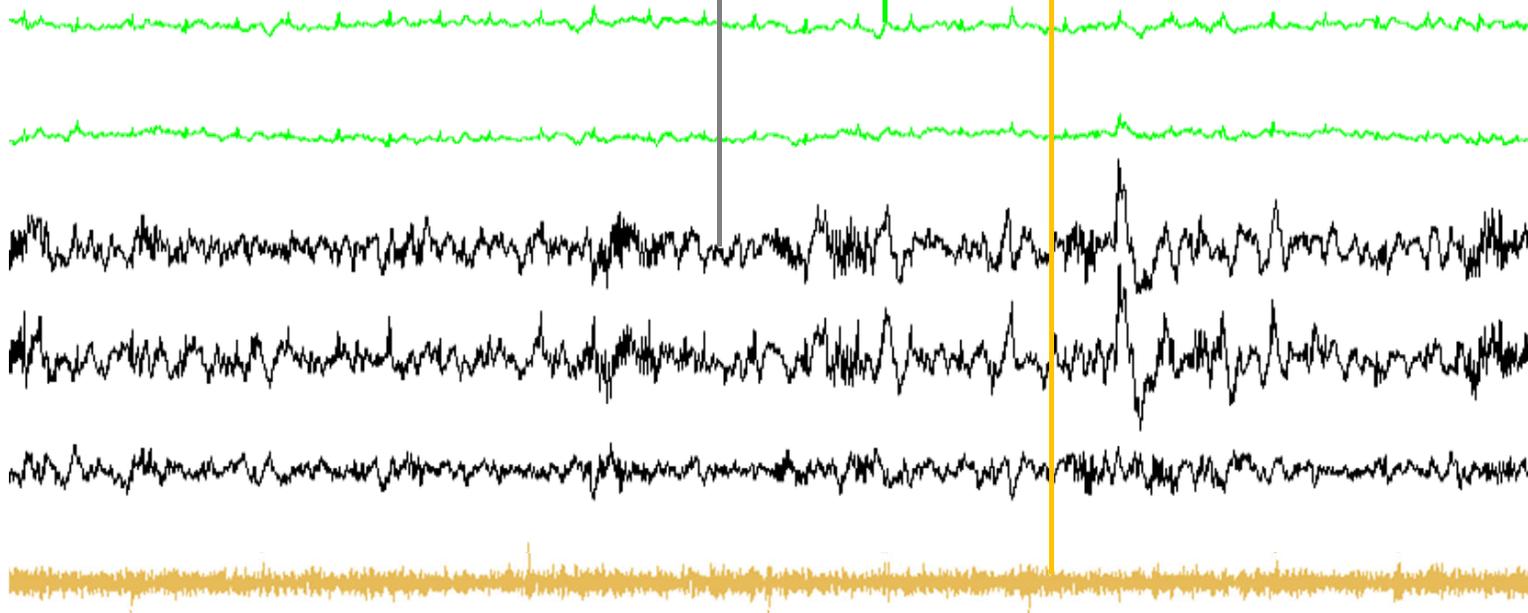

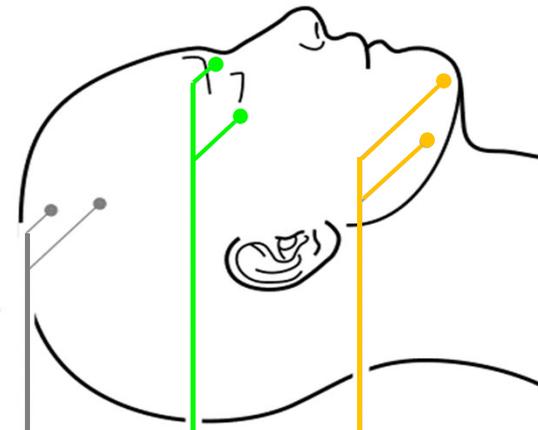

## Sleep stages: N2

- sleep spindles (10-16Hz) 

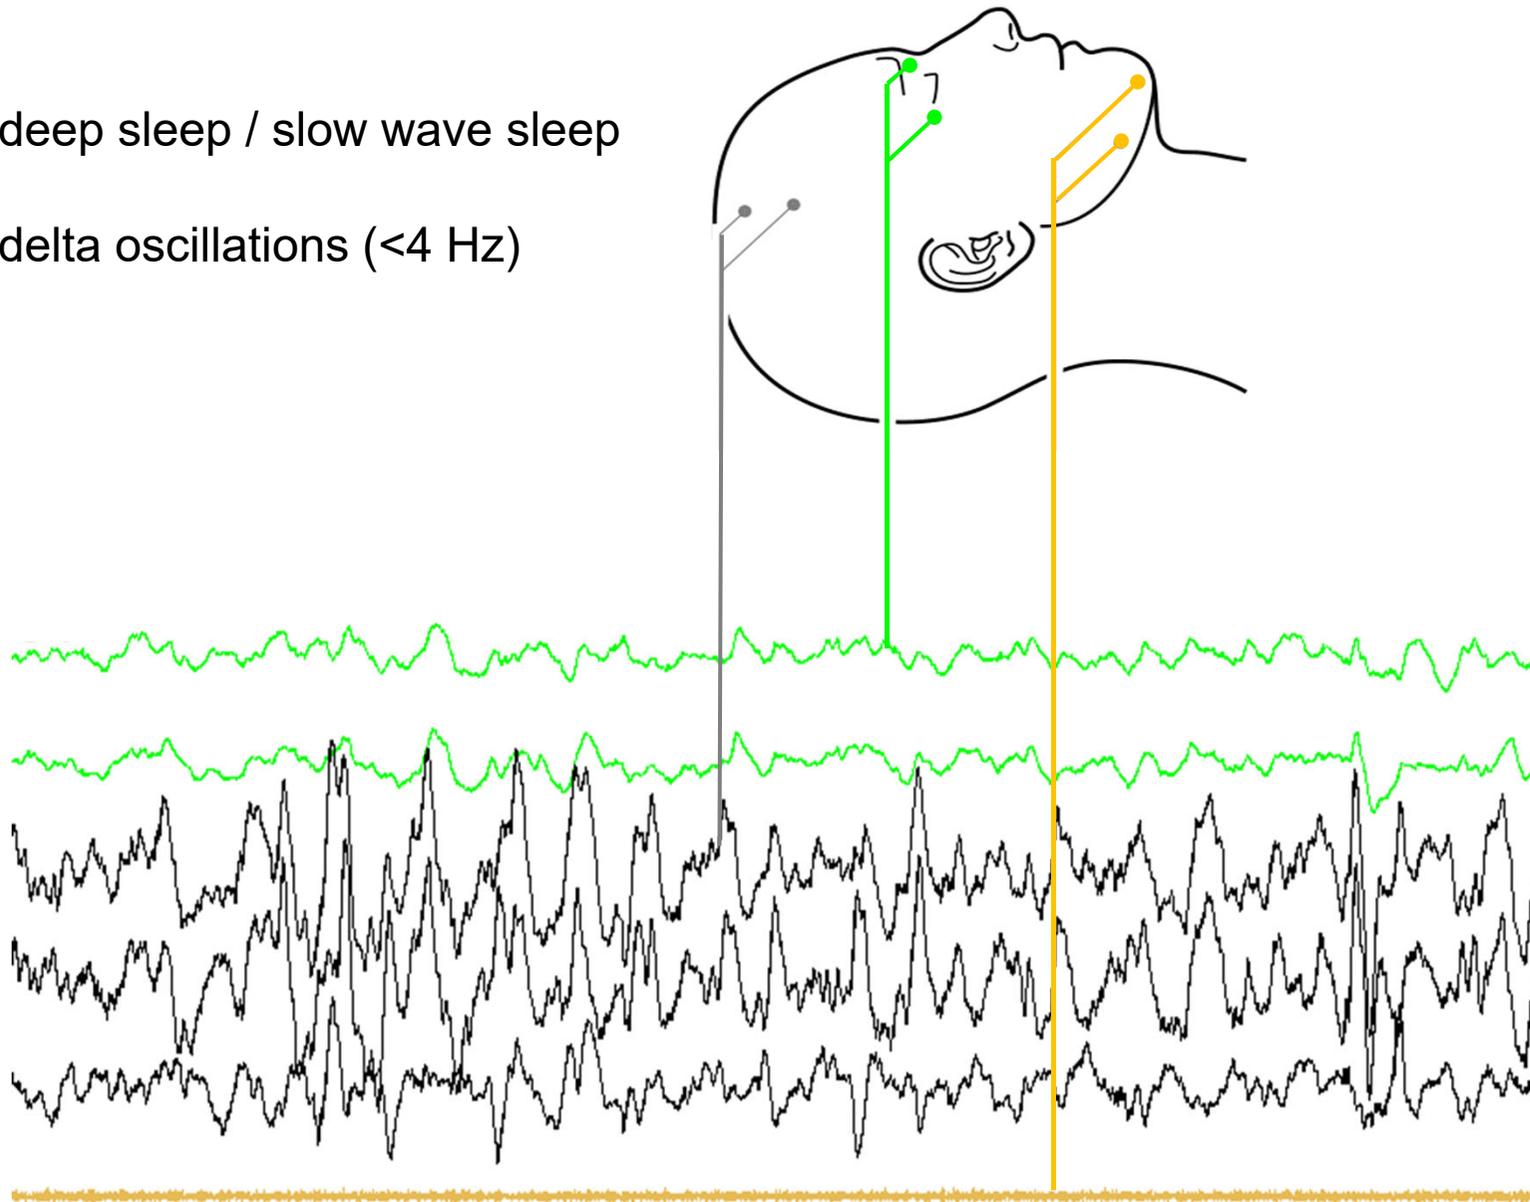

- K-complexes (0.5-1Hz) 

## Sleep stages: N3

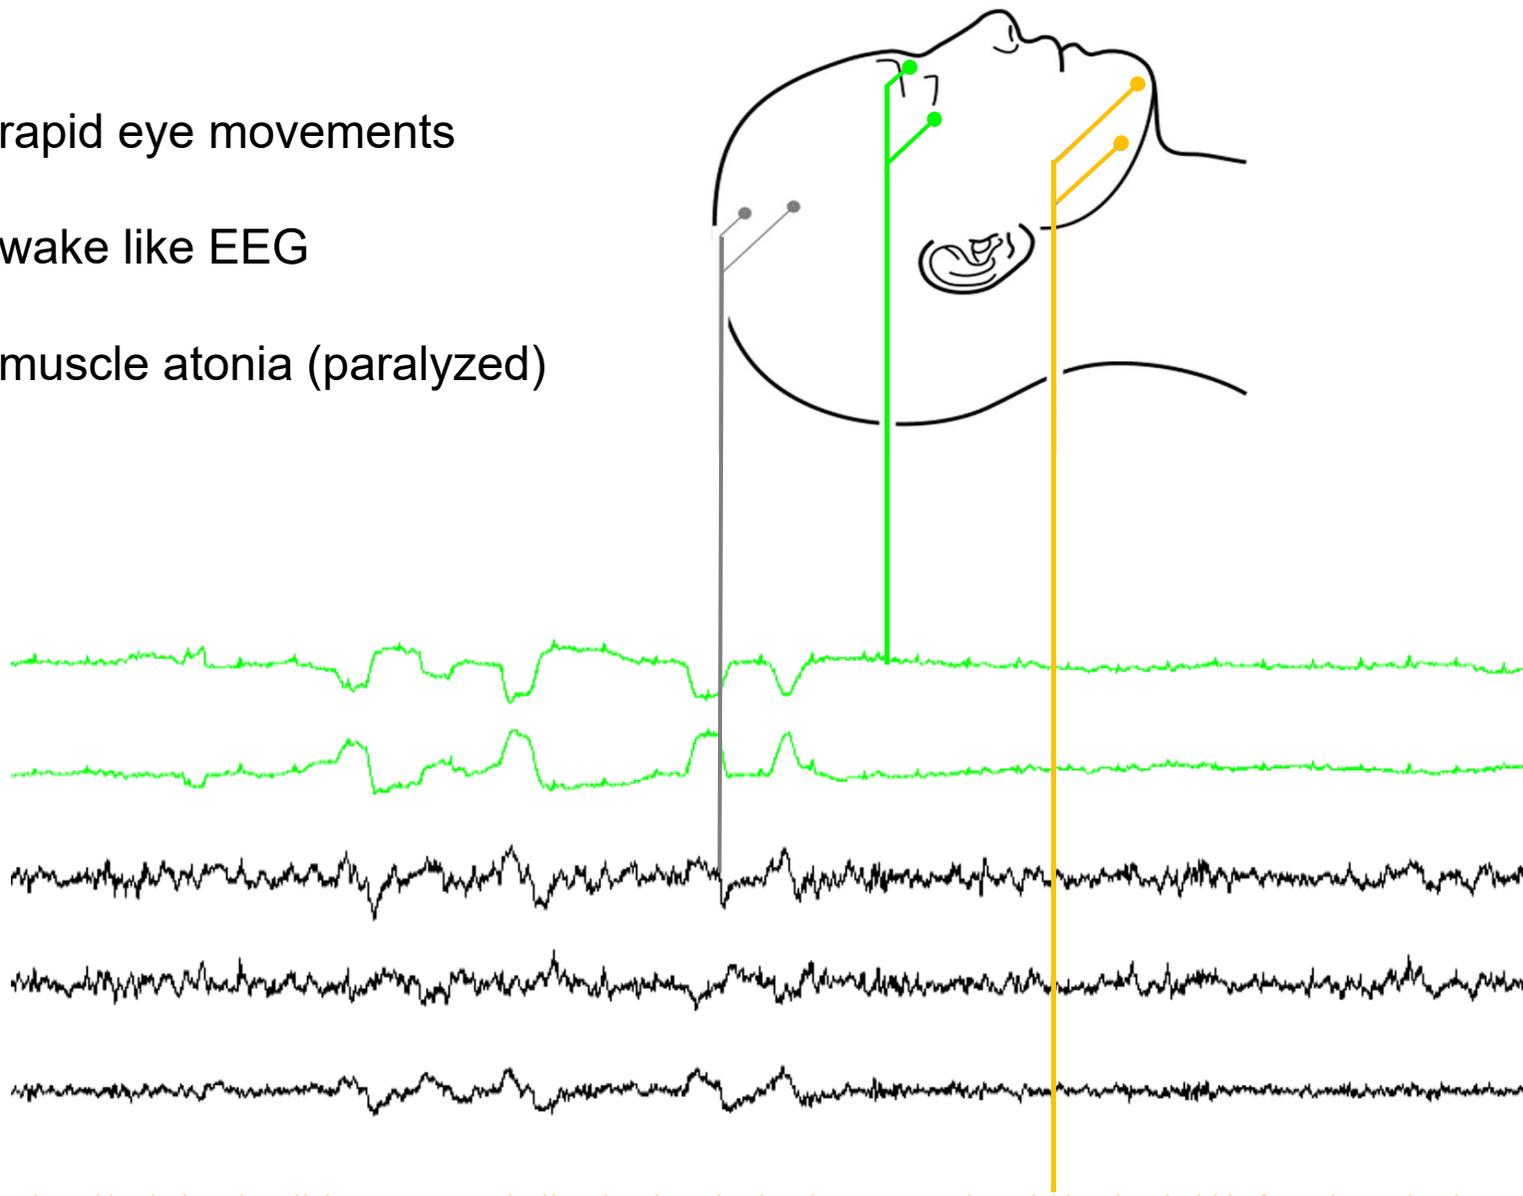

- deep sleep / slow wave sleep
- delta oscillations (<math><4\text{ Hz}</math>)

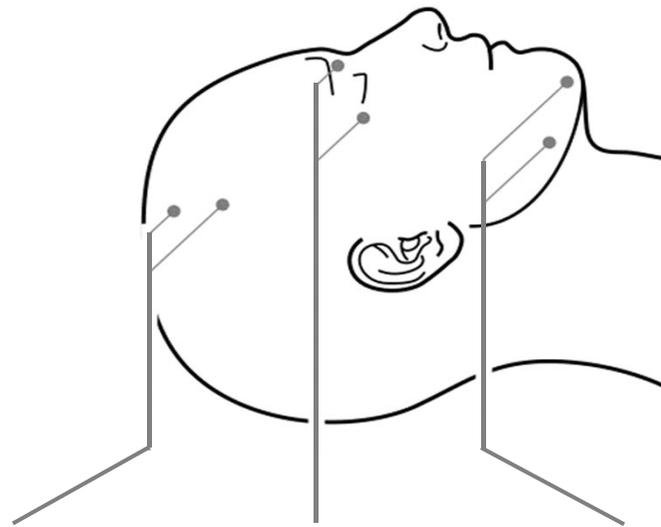

## Sleep stages: REM

- rapid eye movements
- wake like EEG
- muscle atonia (paralyzed)

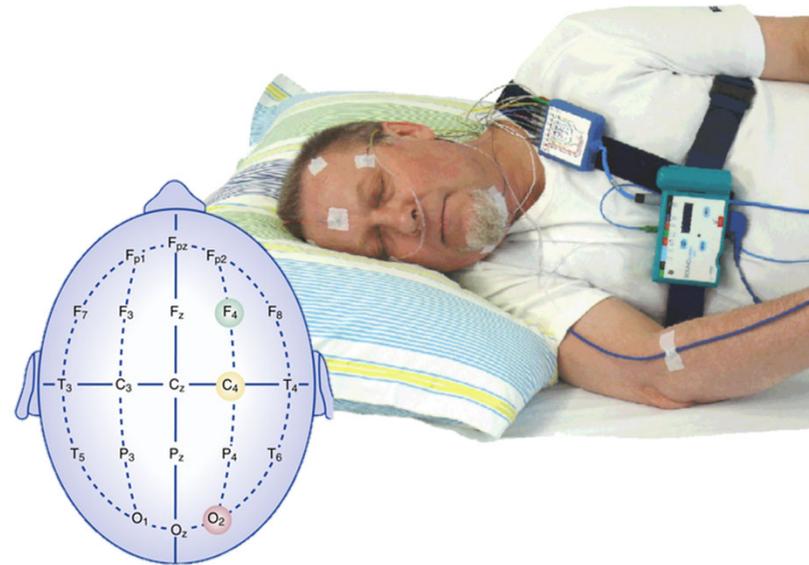

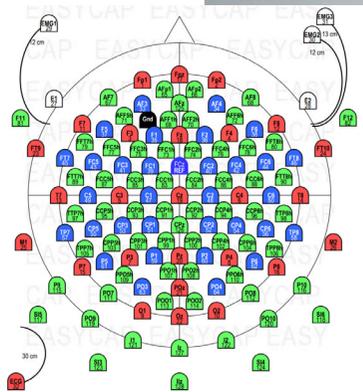

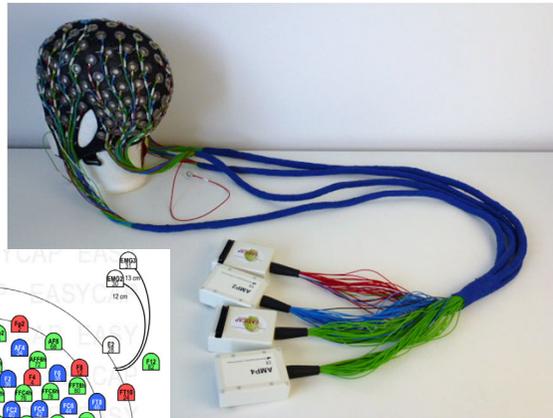

# Sleep stages: overview

	Brain / EEG	Eyes / EOG	Muscles / EMG
wake			
REM			
N1			
N2			
N3			

# Sleep EEG: lab vs. home recordings

## Sleep EEG headbands

Aurora (iWinks)

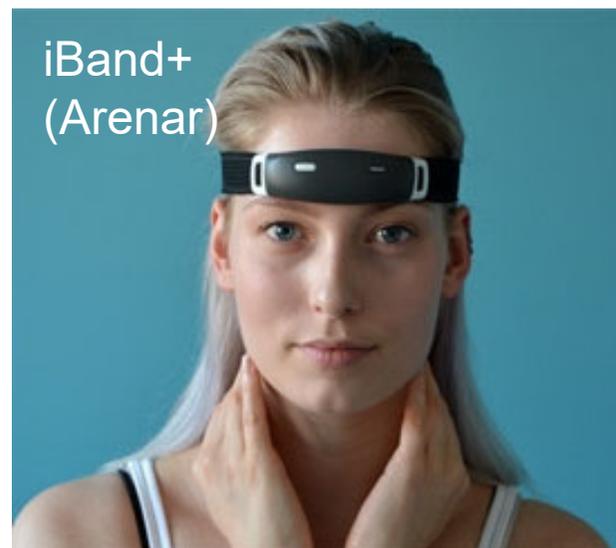

Dreem  
(rythm)

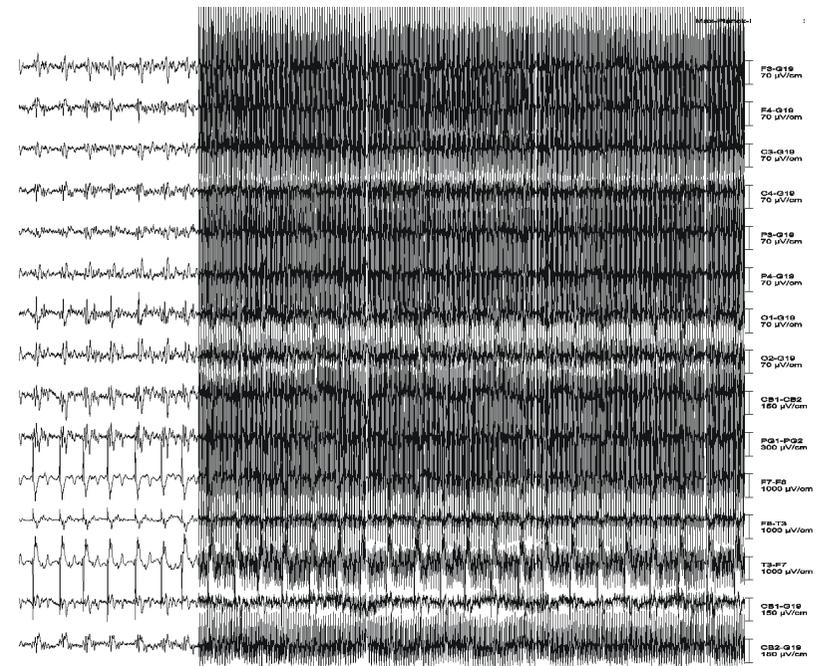

zMax (Hypnodyne)

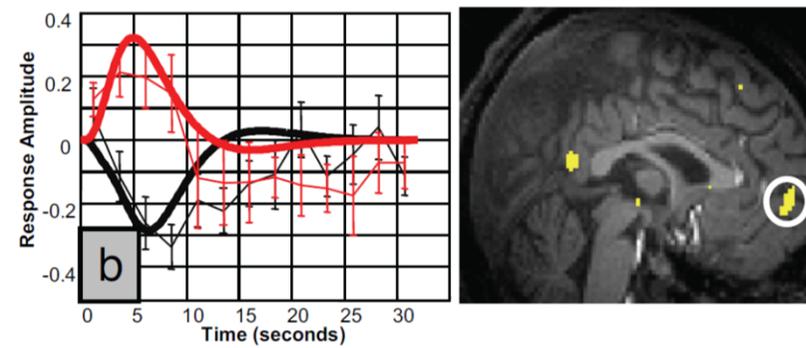

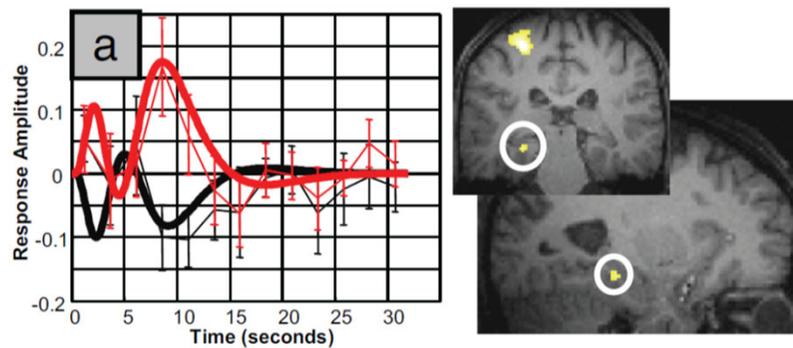

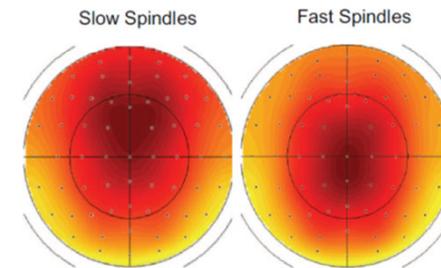

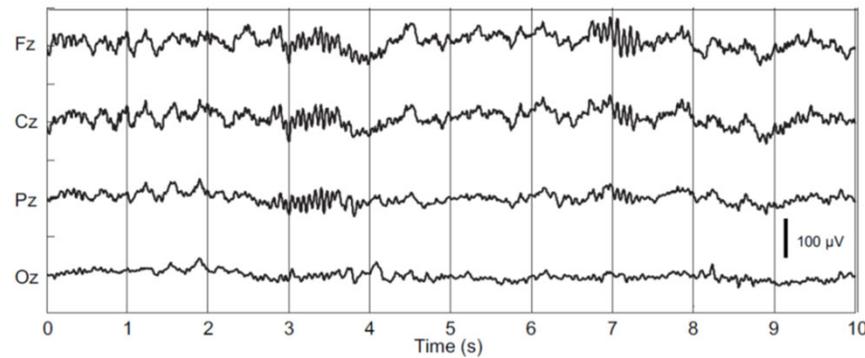

iBand+  
(Arenar)

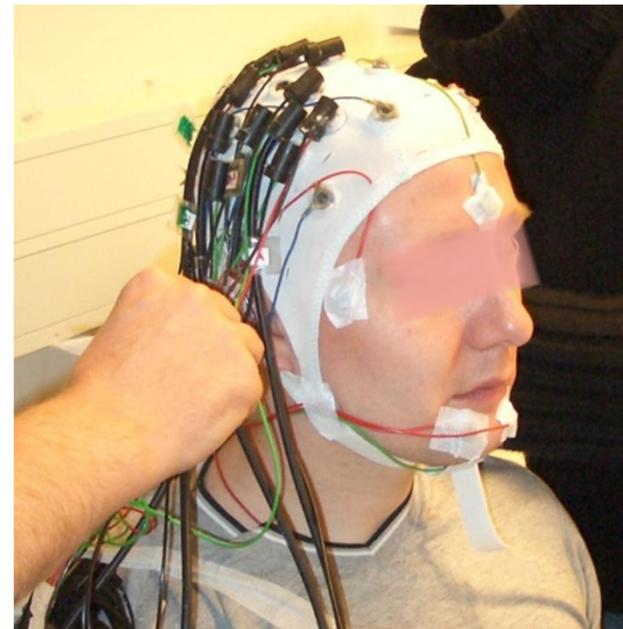

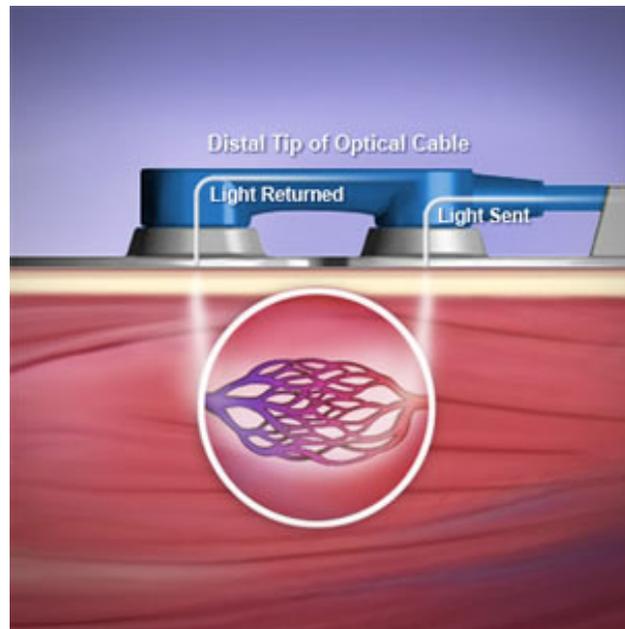

# Combined EEG/fMRI

# Combined EEG/fMRI: sleep spindles

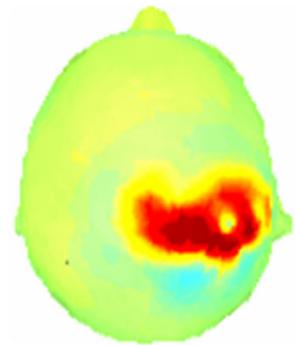

# Combined EEG/NIRS

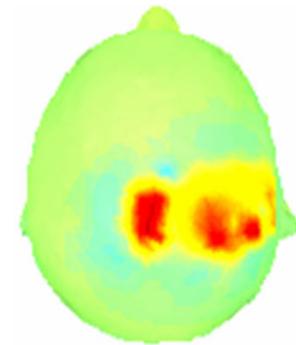

# Combined EEG/NIRS

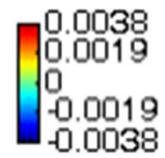

real hand movements

dreamed hand movements

HbO

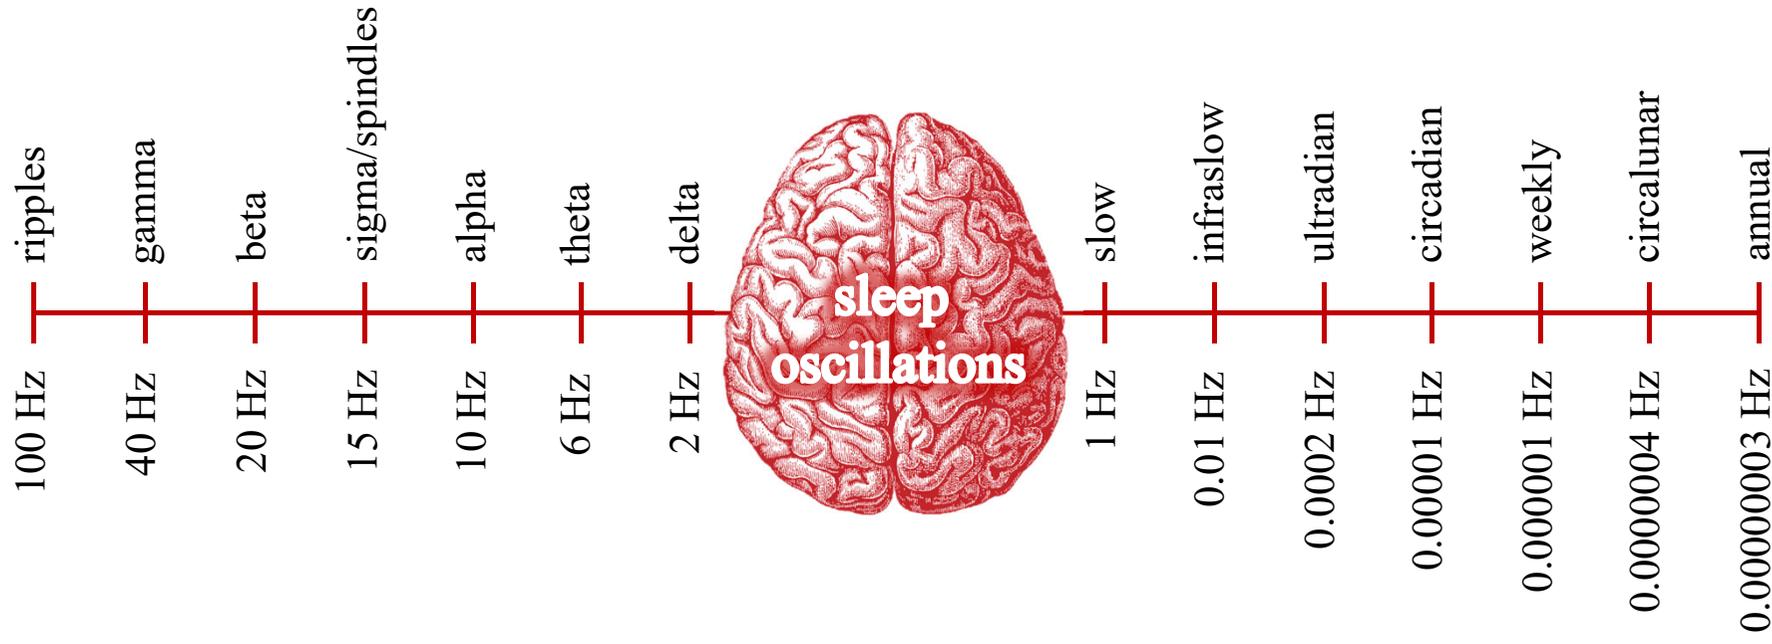

# Spontaneous EEG and Sleep

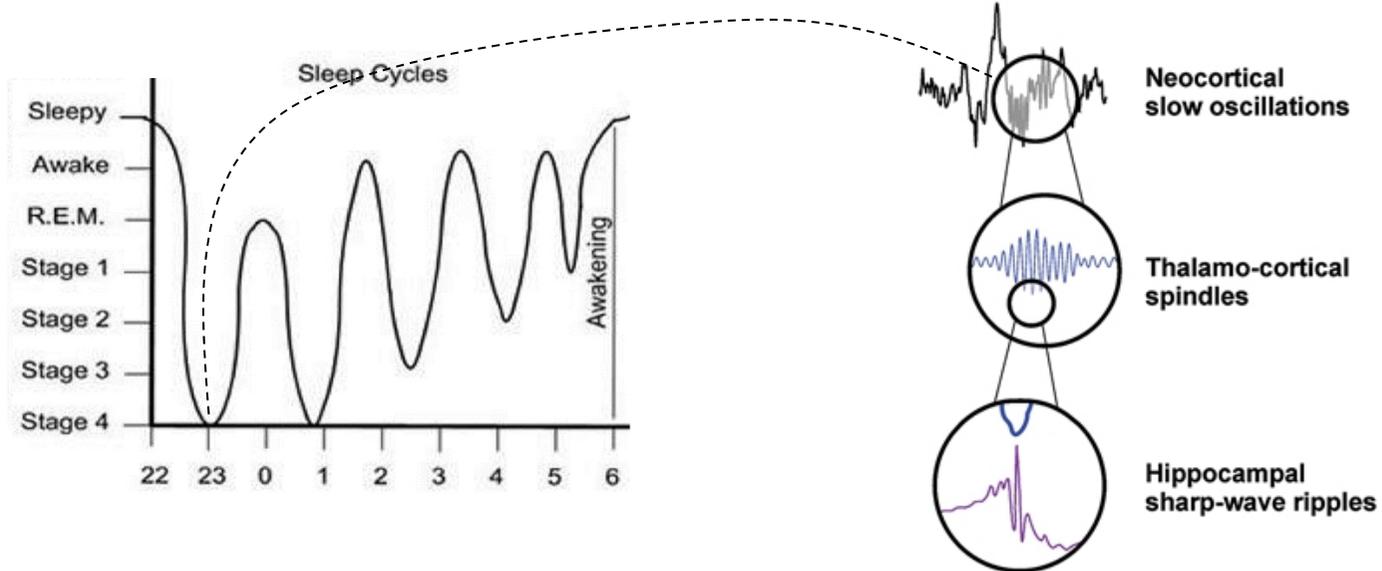

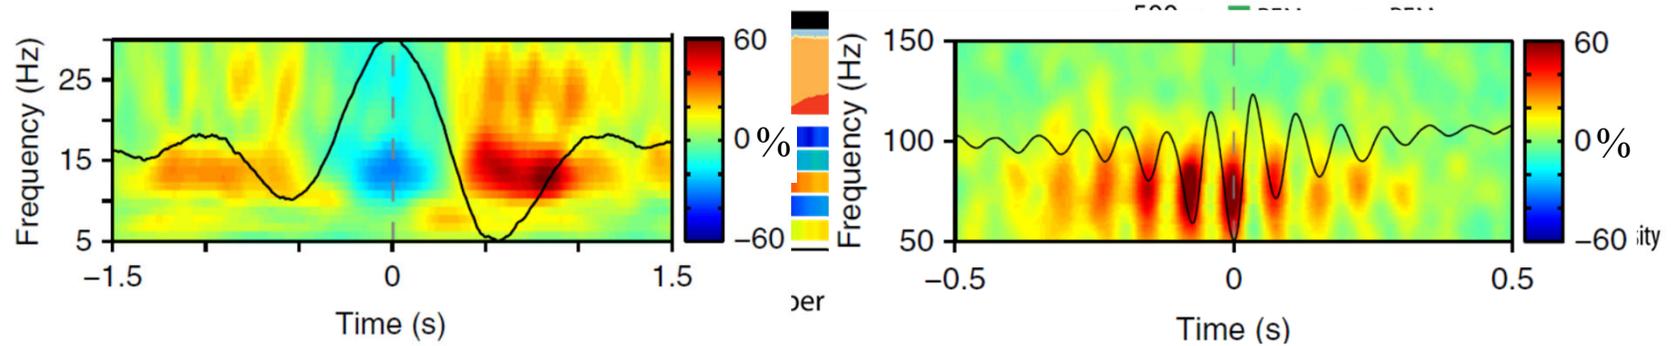

## Agenda

- Recording methods
- Oscillations on different time scales
- Examples: functions of sleep

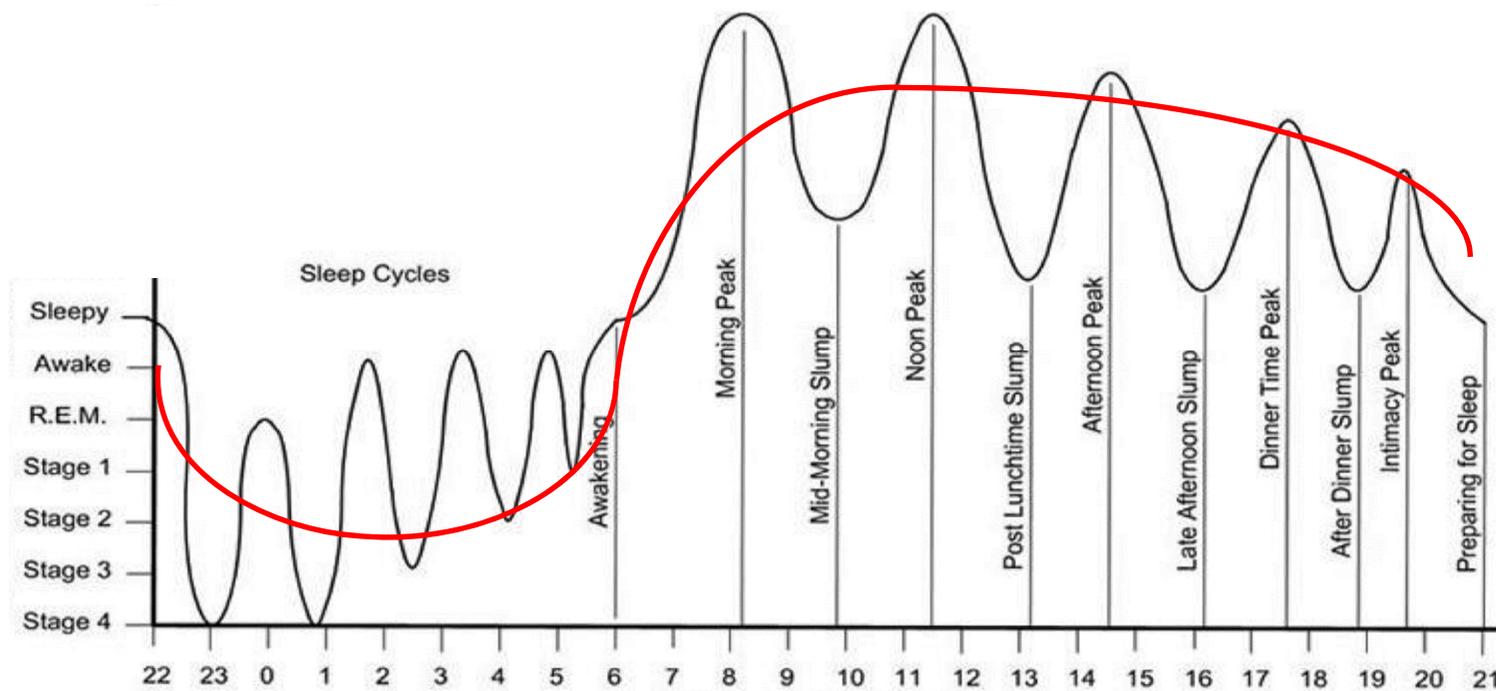

# Sleep oscillations

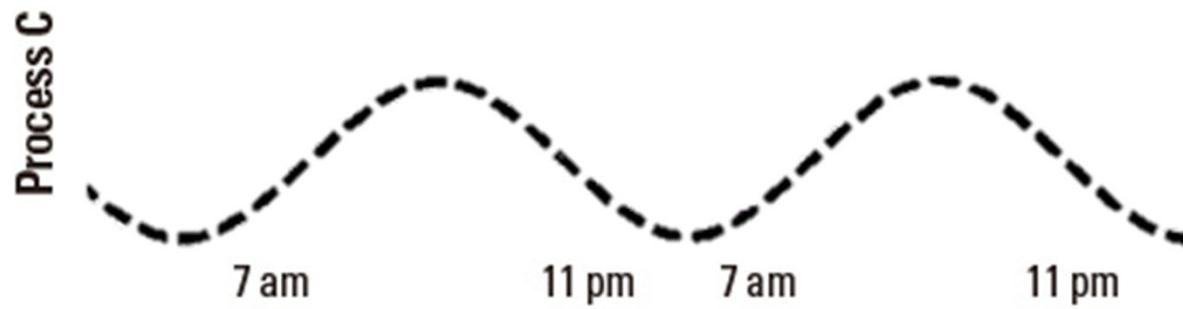

# Sleep: nested oscillations

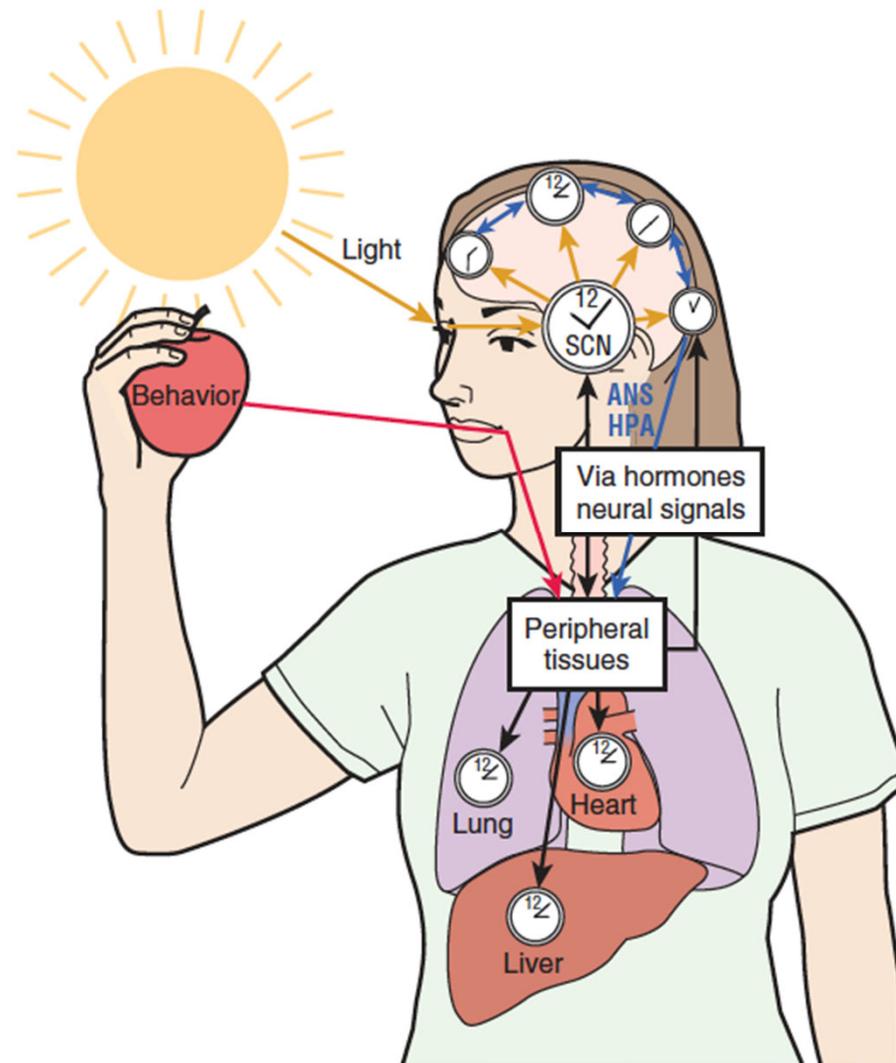

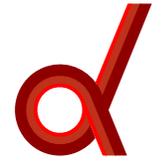

# Sleep: ultradian oscillations

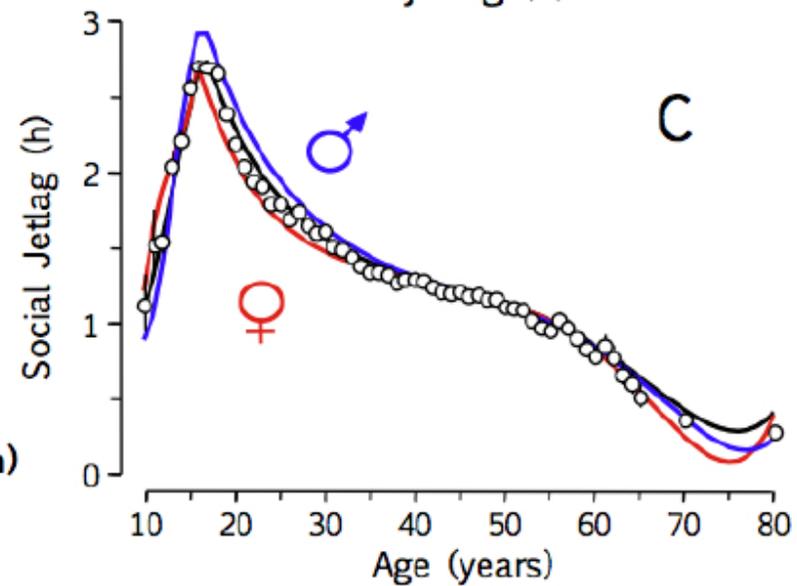

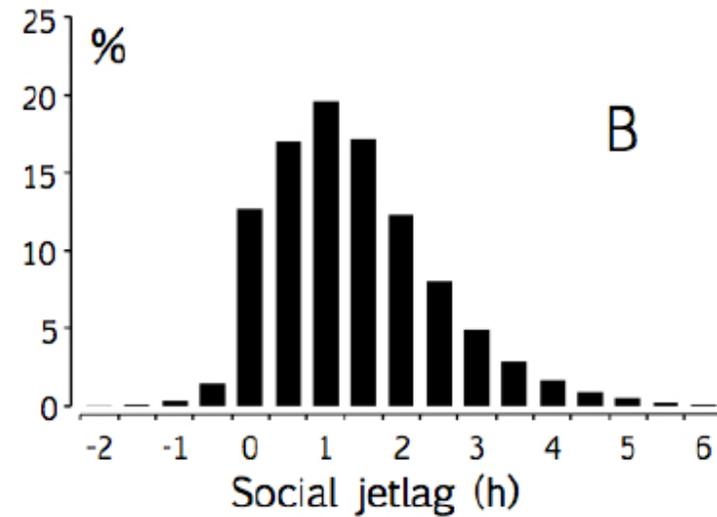

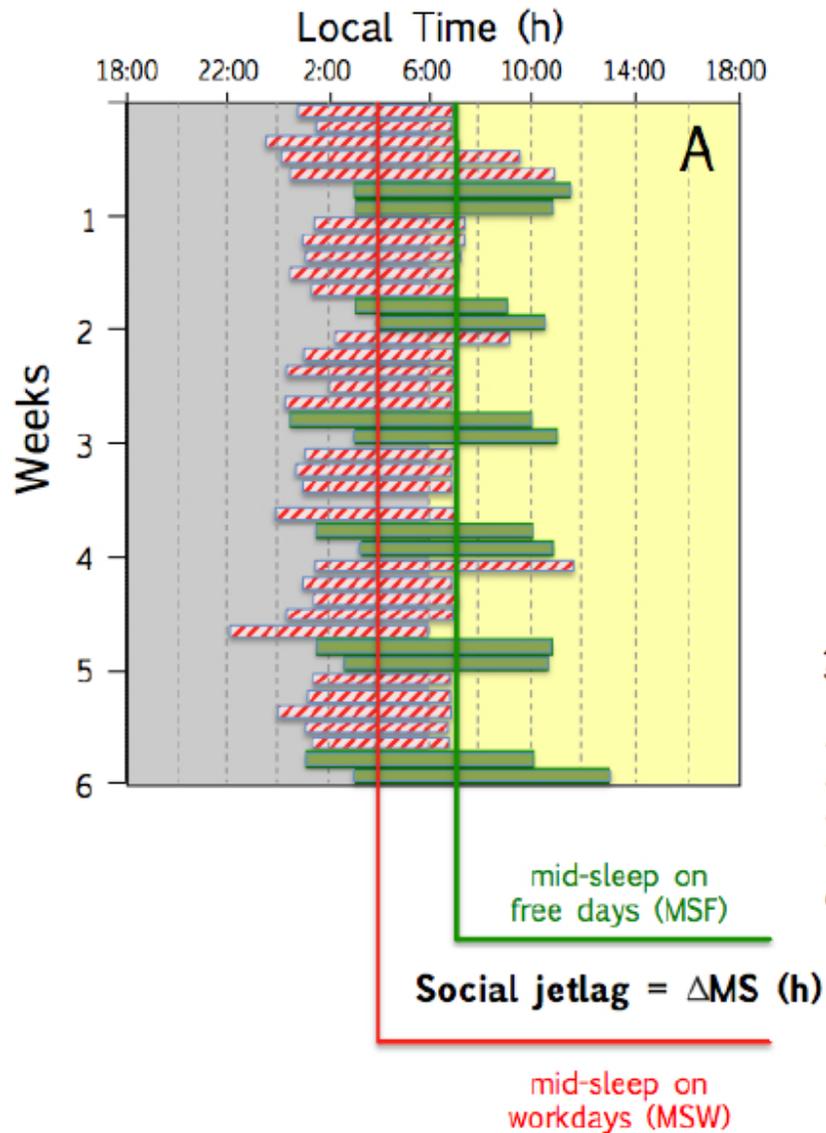

# Sleep: circadian oscillations

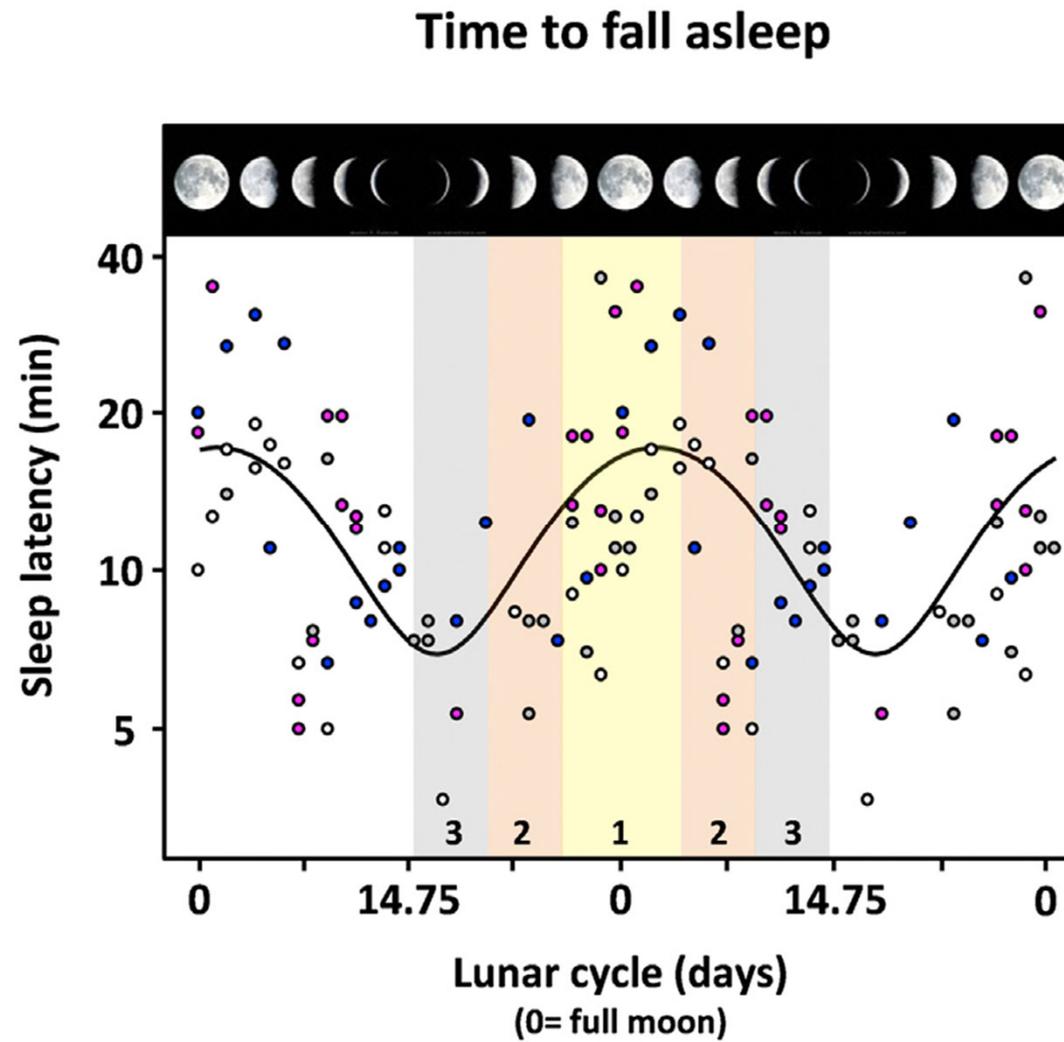

# Sleep: synchronization through light

# Sleep: weekly oscillations

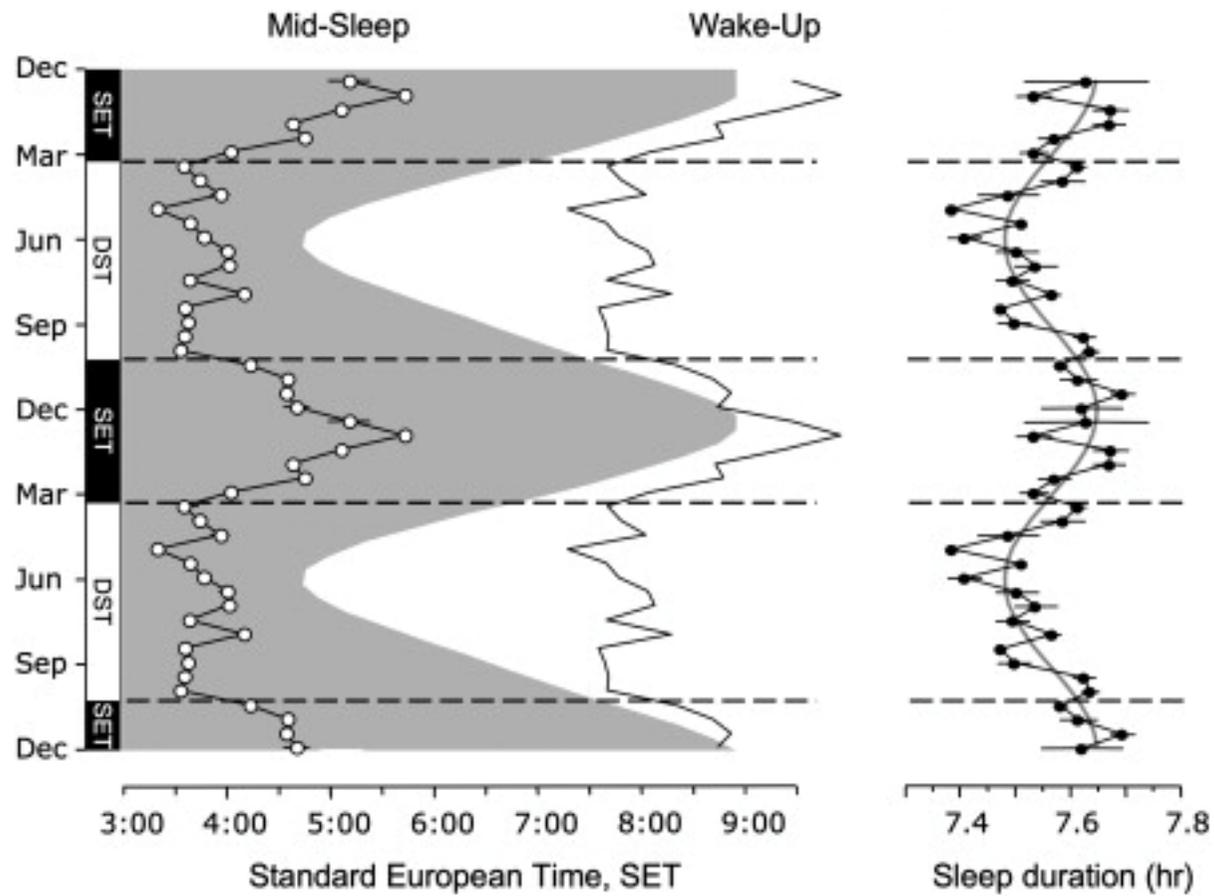

# Sleep: monthly oscillations?

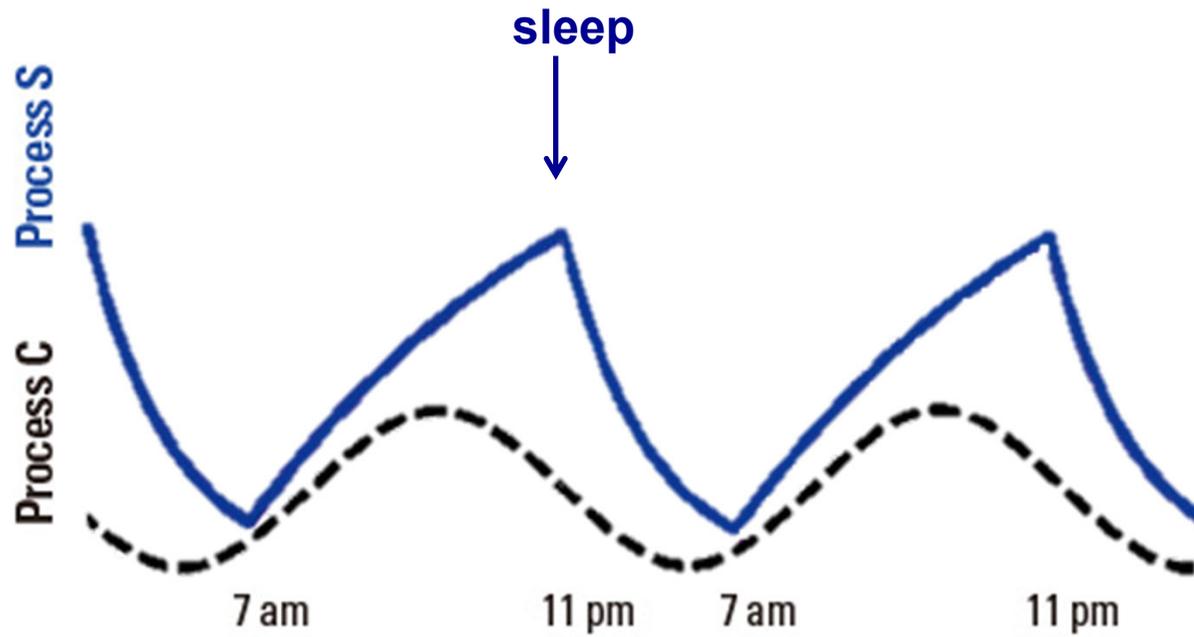

Cajochen et al., 2013  
but: Cordi et al., 2014

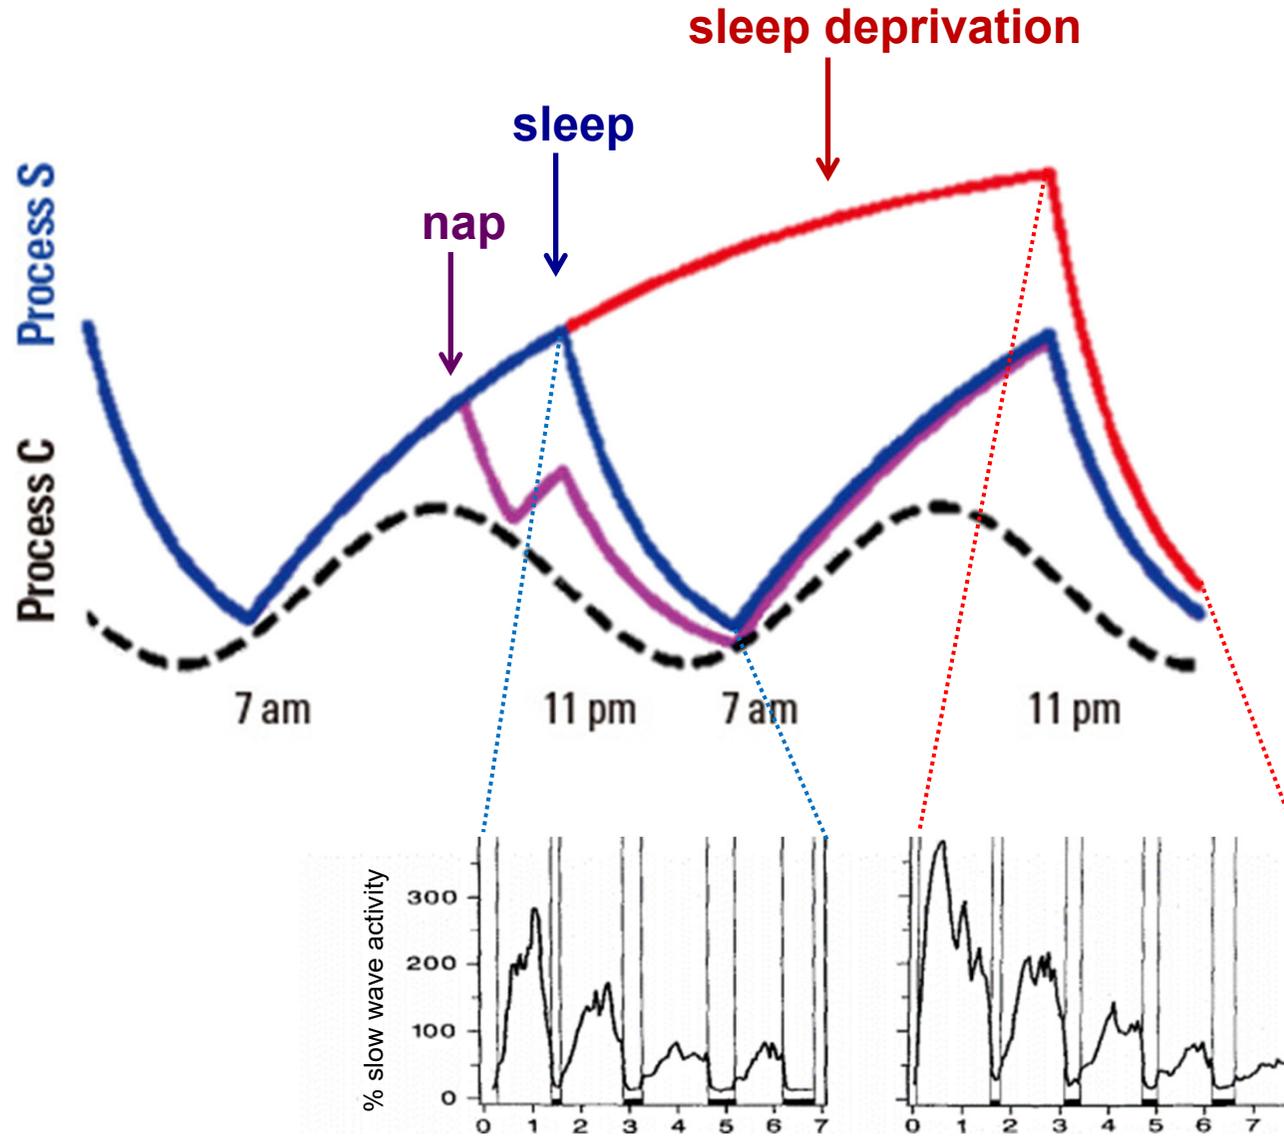

# Sleep: annual oscillations

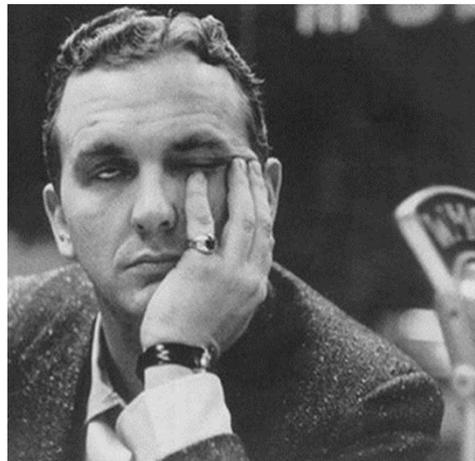

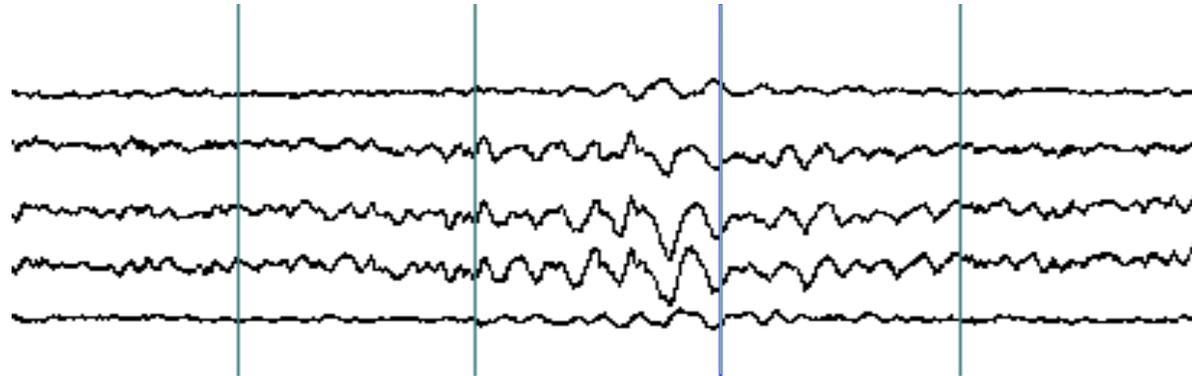

# Sleep regulation: two-process model

# Sleep regulation: two-process model

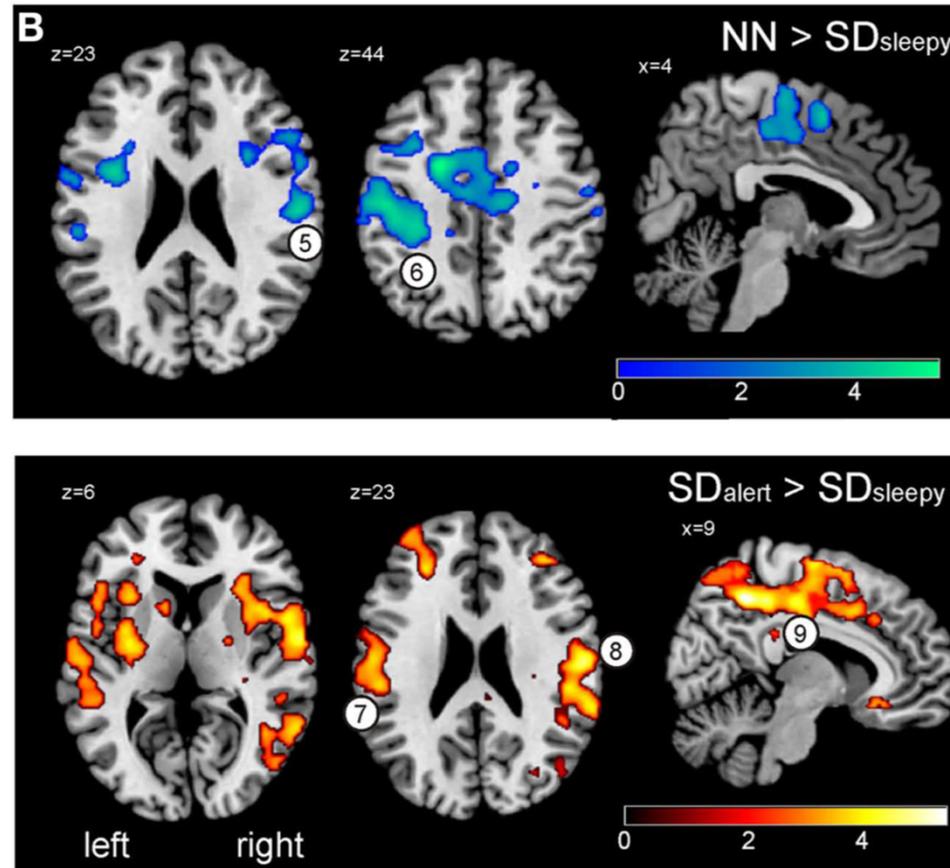

## Sleep pressure

– microsleep

– local sleep

# Combined EEG/fMRI: vigilance measurement

# Spontaneous EEG and Sleep

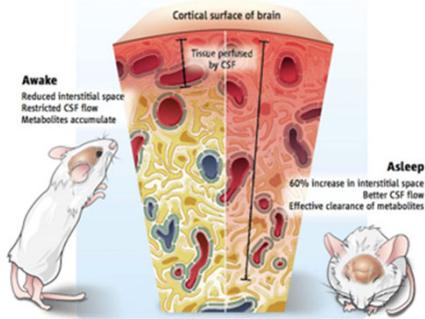

## Agenda

- Recording methods
- Oscillations on different time scales
- Examples: functions of sleep

# Sleep: more than a substitute for coffee!

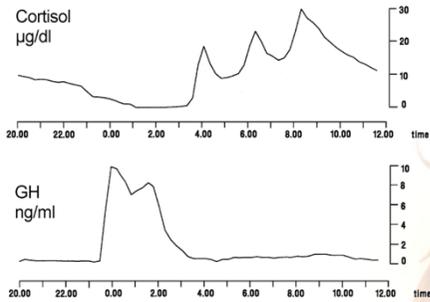

brain clearance

40 Hz: lucid REM

Voss et al., 2009

Voss et al., 2014

## Conclusions

- Spontaneous EEG activity harbors important information
- In particular sleep before, during, after experiment!
- Cascade of nested oscillations
- Options to manipulate spontaneous oscillations
